GRAINTRAC

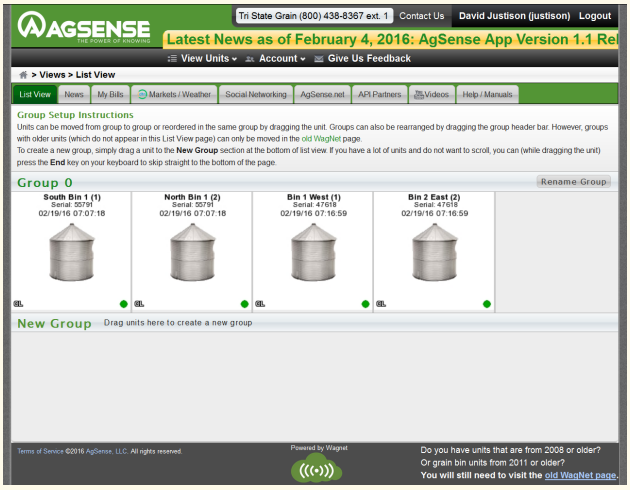
Remote Bin Monitoring & Fan Control Anytime, Anywhere!

TAKING THE GUESSWORK OUT OF GRAIN STORAGE

The key to safe and successful grain storage is **temperature**.

PUTTING INFORMATION TO WORK

- View current and past readings
- Configure alarms
- Text or email alerts
- Preserve grain quality
- Lower energy costs



GRAIN TRAC AT A GLANCE

- Easy to upgrade existing systems.
- Readings taken 4X/day for timely temperature data.
- Real time temperature availability.
- Data sent to secure website.
- Optional WeatherTRAC Remote Weather Station.

GRAIN STORAGE MADE BETTER

AGSENSE

GRAIN TRAC

THE POWER OF KNOWING™

REMOTE GRAIN TEMPERATURE MONITORING AND ALERTS

Grain Trac removes the guesswork from grain storage and reduces the number of necessary trips to the bin site by remotely monitoring grain temperature. Customizable notifications alert you to 'hot spots' as they begin, rather than discovering them after the damage has been done.

- Grain Trac reads most temperature cables on the market including Boone, Tri-States Grain, and most versions of OPI.
- Saves energy and prevents loss of weight/bushel due to over-aeration.
- Temperature readings are sent to the web, where they can be viewed along with your other AgSense monitored devices from any smartphone, tablet or computer.
- Readings are taken every 30 minutes to collect timely temperature data. You also have the option to request temps any time you want.
- Help prevent mold and insect infestation with configurable alarms that identify the beginning of heat activity.
- Theft monitoring alerts (see below).
- Access real-time and historical grain temperature information.
- Aid in making storage decisions.
- Save time on driving, climbing and note-taking.
- Optional weather sensors provide the ability to monitor humidity, rainfall & wind.
- Fan control option available.

THEFT MONITORING CIRCUIT

The Grain Trac system includes a theft monitoring circuit that can be set to send alerts to your phone and email when your grain handling system is started or stopped. These easily configured alerts also aid in knowing progress of trucks loading or unloading at your facility during harvest or when selling grain.

GRAIN TRAC IS AVAILABLE THROUGH TRI-STATES GRAIN CONDITIONING

TRI-STATES GRAIN CONDITIONING
GRAIN STORAGE MADE BETTER

The Grain Trac system is distributed exclusively by Tri-States Grain Conditioning (TSGC) or through its nationwide dealer network. TSGC custom designs the Grain Trac system to match each grain handling facility, insuring it meets the unique needs of the installation. TSGC will arrange installation if desired, and also has temperature cables available for purchase. For more information or a quote, email, call, or visit the TSGC website.

SafeTrack™ Wireless

Volume & Grain Temperature Monitoring System

Monitor Your Grain - Anytime, Anywhere

SafeTrack is a complete and easy solution for monitoring commodity volume and temperatures. Data analyzing, reporting and archiving is quick and easy.

Wireless radio options minimize conduit and installation costs.

Modular components are expandable to any size system.

- Volume monitoring (+ or - 4%)
- Commodity temperatures
- Ohms testing for cable integrity check
- Product rate-of-rise
- Detailed audit trail
- Historical graphing to plot trends
- Flexible reporting options
- Remote scanning via the Internet
- Manual or scheduled scanning and reporting
